

Get Call Center–Like Metrics & Reporting ...without the Contact Center Expense or Complexity

Delivering Value Organization–Wide

CIO | CFO | CTO

- Significant cost savings when using included queuing features bundled with ISI Queue Analytics vs. Contact Center applications
- Reduced complexity – easier to manage for Operations and Voice Teams
- Easily add additional queues and users as needed

Operations Team

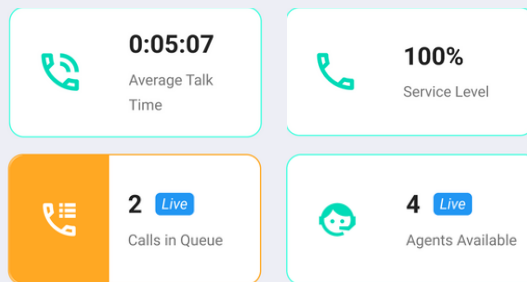

- Call Center–like analytics for data–driven decisions
- Implement and manage core Contact Center KPIs without heavy investment
- Actionable intelligence driven by customer calling experience metrics

IT | Voice Team

- Seamless integration with existing calling platform
- Simplify ad–hoc reporting and end–to–end caller journey analytics
- Easier to manage call center–like capabilities vs. Contact Center applications

ISI Queue Analytics for Microsoft Teams Phone, Webex Calling, and Cisco UCM is a low–cost alternative to expensive contact center infrastructure. Make data–driven decisions to satisfy fundamental business needs around real–time queue monitoring, agent performance metrics and customer journey analysis with ISI Queue Analytics: The Ultimate Queue Performance Tool.

Real–time Dashboard Views

- Supervise agent productivity and performance in real–time and make sure your teams are hitting their KPIs
- Color–coded threshold alerts allow you to identify and respond to problems quickly, flagging good, poor and critical conditions

Live Queue Summary

- Real–time reporting visibility, including calls in queue; agent availability; call abandon rate; and more.
- See what’s happening now in each of your queues:

Daily & Hourly Statistics

- Access critical call performance data refreshed in real–time. Total number of calls, calls handled, calls abandoned, call queue times, and service level – it’s all there. Drill down further to secure hour–of–day details for each call.
